

AI Hedge Fund OS Full Stack Report

Current live foundation, operating flows, agent team, model routing, data spine, MCP/skill stack, GUI surfaces, and remaining production gaps for the personal AI investment office.

Generated 2026-07-06T01:28:48+05:30 from live local API, Postgres read models, Qdrant collection metadata, and service health checks.

Snapshot issues

API query failures

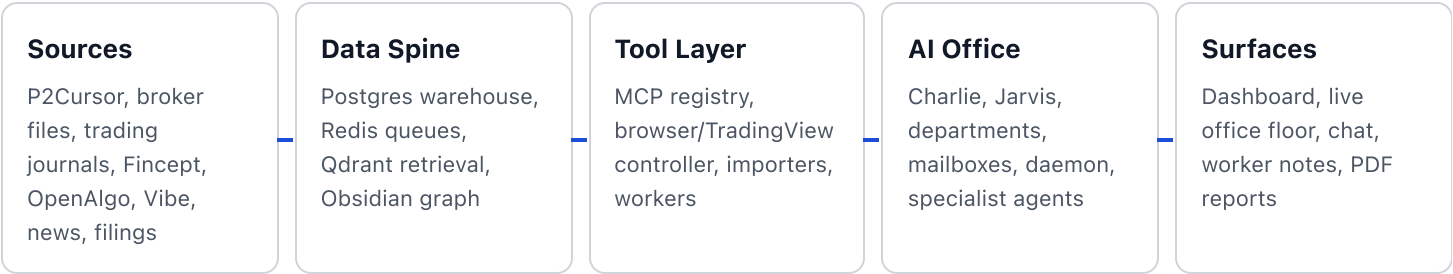

Current state:

The operating foundation is live: dashboard, API, Postgres warehouse, Qdrant retrieval collections, agent team, mailboxes, message daemon, worker notes, Obsidian writeback, and a first live AI office floor view.

Boundary:

This is not yet a fully autonomous hedge fund or live broker execution system. Trading execution remains intentionally blocked behind human approval, risk review, connector proof, and execution safety gates.

Architecture Flow

The stable direction is existing systems and external sources into a live warehouse, then MCP/tool adapters, then Jarvis and specialist agents, with durable output to dashboards and Obsidian.

Live Operating Surfaces

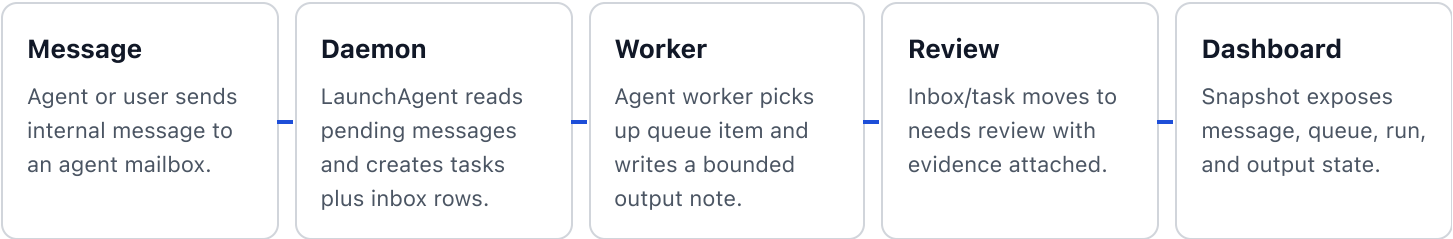

Implemented

- AI Office dashboard at local URL with live warehouse snapshot.
- Charlie chat operating layer with retrieval and widget intent creation.
- Dashboard widgets backed by warehouse queries.
- Agent team roster, departments, skill matrix, model routing, hierarchy, mailboxes, messages.
- Live AI office floor panel showing employees and work-state animation labels.
- Obsidian output reports and worker run notes.

Remaining UI Product Work

- Richer animated office scene with rooms, desks, hover cards, and live task movement.
- Click-through employee pages with task history, inbox, skills, model route, and outputs.
- Bloomberg-style portfolio and market dashboards with drill-down research packs.
- Browser/TradingView visual artifact capture panel.

Agent Communication Flow

Latest smoke proof: API-created message was processed by the daemon into task 16, inbox 23, and worker run 21.

ID	FROM	TO	SUBJECT	PROCESSING	TASK
11	Charlie Munger	Data Steward	Daemon production smoke test	task_created	16
10	Trading Desk Agent	Execution Safety Agent	Live execution stays gated	task_created	11
6	Charlie Munger	Jarvis	Run the office through evidence, not vibes	task_created	12
7	Portfolio Manager	Research Analyst	Holdings need thesis maintenance	task_created	13
8	News Analyst	Filings Analyst	Exchange announcements must become filing facts	task_created	14
9	Strategy Generator	Model Validation Agent	No generated strategy goes live without challenge	task_created	15

Hedge Team Hierarchy

Fincept Status

COMPONENT	INSTALL	BUILD	RUNTIME	NOTES
FinceptTerminal native Qt app	installed	build_success	local_development_install	not packaged with macdeployqt yet, requires SSD Qt rpath and Homebrew OpenSSL on this machine, launch outside Codex sandbox for Qt CPU feature access

Fincept is installed as a local reference/component checkout and skill source. Direct delegated runtime use remains planned.

MCP And Connectors

INTEGRATION	CATEGORY	STATUS	PERMISSION	USE CASE
Microsoft Playwright MCP	browser_control	approved_candidate	browser_read_capture	Control browser pages, capture accessibility snapshots/screenshots, open TradingView/NSE/BSE pages.
NSE/BSE Filings Browser Adapter	filings	approved_candidate	browser_read_capture	Capture India corporate announcements, filings, schemes, demergers, reverse mergers, and board actions.
TradingView Data MCP Candidate	tradingview	approved_candidate	market_data_read	Evaluate for real-time market data, technical analysis, screeners, and backtesting workflows.
Official MCP Filesystem Server	filesystem	approved_candidate	scoped_filesystem	Scoped file reads/writes for approved folders only.
FinceptTerminal Sidecar MCP/Component Bridge	finance_terminal	installed	local_app_bridge	Use installed Fincept components for analytics, charting patterns, options, data connectors, and MCP tool ideas.
TradingView Desktop Automation MCP Candidate	tradingview	installed	write_with_human_gate	Evaluate for desktop TradingView chart workflow automation and chart analysis.
Official MCP Fetch Server	web_fetch	approved_candidate	web_read	Fetch and convert public web pages into LLM-friendly text.
Firecrawl MCP Server	web_scraper	candidate	web_search_extract	Search, scrape, crawl, and extract web content where plain fetch is weak.
Tavily MCP Server	web_search	candidate	web_search_extract	Real-time search, extract, map, and crawl for market/news discovery.
Official MCP Git Server	code_repo	approved_candidate	repo_read	Inspect cloned source components, diffs, commits, and code history.
SEC EDGAR Direct API Adapter	filings	approved_candidate	public_data_read	US filings, company facts, and filing history for global research.
PineScript MCP Candidate	strategy_development	reference_only	none_reference	Assist Pine Script strategy

INTEGRATION	CATEGORY	STATUS	PERMISSION	USE CASE
				drafting/checking before TradingView tests.

Production Readiness And Remaining Gaps

Ready Now

- SSD-backed runtime layout and persistent Postgres/Qdrant/Redis Docker data.
- API and UI LaunchAgents.
- Agent message daemon LaunchAgent.
- Internal mailbox to task to worker to note flow.
- Agent hierarchy, characters, models, skills, external skill registry.
- Obsidian notes indexed and reports written back.

Not Yet Final Hedge Fund Production

- TradingView CDP is currently False; TradingView must be relaunched with remote debugging for desktop control.
- Ollama local model server works manually but is not started by default as a reliable LaunchAgent.
- OpenAlgo, Vibe-Trading, and Fincept direct adapters are planned, not fully delegated live adapters.
- Live broker execution remains disabled by design.
- NSE/BSE/news/social collectors and filing parsers need scheduled production connectors.
- Full animated office scene and employee hover/task movement are next UI layer.

Recommended Next Build Order

1. TradingView relaunch/controller fix and screenshot artifact capture.
2. Read-only OpenAlgo market-data adapter, then options analytics.
3. Vibe-Trading MCP read-only adapter for research/tools, isolated from broker writes.
4. Fincept report/tool catalog bridge as component reference, then selected direct calls only if stable.

5. News, filings, and corporate-action collectors with source URLs and scheduler.
6. Animated AI office scene: employee hover cards, live task lines, mailbox badges, work-room grouping.
7. Risk/approval policy engine before any broker write path.

Source Notes

External repo references used in stack design: FinceptTerminal, OpenAlgo OKF/docs, and Vibe-Trading. Local private data remains in the local SSD-backed warehouse and vault.
